

I am writing to you to offer an alternative to your current approach on Climate Change and related policy. I realise this letter could be intercepted and “filtered” out by an unsympathetic admin person, or an over-conscientious advisor.

My View:

A serious mistake has been made by the promoters of the postulate of “Global Warming caused by Carbon Dioxide” (CO2 GW). All of the physical parameters pointed as evidence of CO2 GW have much less spectacular explanations than the devastating claims of the IPCC. Many of the claimed parameters are fraudulent and do not exist. I can give simple examples of this.

I realise your positions are so “locked in” that you cannot change Labour policy.

I have no affiliation to any political or pressure group (apart from the fact that I work in the renewables industry) and I will keep discussions confidential.

Who am I ?

A qualified Engineer, Australian trained and recognised in the renewable energy area, who has set up his own business 17 years ago to specialise in renewable energy, energy efficiency and sustainability. I have designed millions of dollars of solar emery systems, and energy audited more than 120 facilities.

Why do I write ?

As the claims of CO2 GW are either grossly exaggerated or false we will end up making decisions for the wrong reasons. As a trained Engineer I know that this means that:

wrong reasons = wrong outcomes.
