

FAMILY SUBMISSION GARNAUT CLIMATE CHANGE REVIEW

Dear Professor Garnaut,

I am writing on behalf of my family as co-signatories to express our concerns for the consequences of global warming if greenhouse gas emissions are not reduced drastically and quickly.

We urge you to recommend that Australia sets strong, science-based targets to reduce greenhouse pollution by at least 30 percent by 2020.

According to the Australian Conservation Foundation, ground-breaking research by global economists McKinsey & Co showed that Australia can achieve a 30 percent cut in greenhouse pollution by 2020 – at a cost of just 80 cents per day for each Australian. That's a small price to pay for a better and safer future for our earth.

We believe that we are on the brink of committing ourselves to dangerous climate change but the right decisions now will make all the difference to future generations.

A strong 2020 target will open up new opportunities for Australia and we want the chance for the younger members of our family to live and work in a clean environment.

We want to see Australia as a world leader in solar and renewable technologies and as a leader in the global community for setting GHG reduction targets which reflect equity for all on our planet.

Professor Garnaut, you have an important task before you and we wish you well.

Sincerely,

The McKenna, Low & Evans families and their partners
-Our Immediate Family
