---

3 January 2008

Prof. Ross Garnaut  
c/- ANU, Canberra ACT.

Dear Prof Garnaut,

**Subject: Renewable Energy Technologies Platform.**

Wishing you and your family every best wishes in Gods blessing for the New Year 2008.

As an engineer and technologist from UTS, I had had extensive experience developing and constructing environmental coal-gasification projects in Lou-Yang and Yima in Henan; and Dalian under Mr Bo Xi Lai in Liaoning Province, China; and In Australia since 1990's pioneering renewable energy technology and constructing Australia's first biomass-fuelled large-scale renewable power plant at Stapylton, Queensland; and various clean-coal small co-generation plants. But these plants are no longer sustainable as it uses water for its process. Water resource was not an issue even in 2001/2002 in Queensland or other States.

I am writing to you hoping that my endeavors in various renewable energy technologies now in prototype stage, could provide some insight in some of the significant new renewable energy technologies platform, that will positively address the issues with large-scale base-load power generation capacity; as well as addressing the massive generation capacity losses in the olden-way and inefficient-methodology with transmissions and distributions of electricity.

I would be most grateful if you are able to review the file attachment called JamesRenewables being the new-technologies-platform that are patented, with distinct-potential as the new innovations that will lead to new sustainable industry, manufacturing and jobs skills for Australian and exports for Australia.

I would also be most welcome to provide a presentation to include a prototype demonstration to you and answer any questions you may have.

Thanking you in anticipation.

Yours faithfully,

James Kwok
