<b>1. Australia's climate change challenge</b>	<b>1</b>
1.1 The context of the draft report in the Garnaut Climate Change Review	6
1.2 Main themes	8
1.3 Main policy tendencies	9
1.4 Adaptation: prospects and limits	11
1.5 Synopsis	12
<hr/>	
<b>2. Policy choice about climate change mitigation</b>	<b>23</b>
2.1 Risk and uncertainty	25
2.2 The costs of mitigation	27
2.3 Four kinds of benefits from mitigation or avoided climate change	32
2.4 How effective adaptation reduces the cost of climate change and the benefits of mitigation	36
2.5 Measuring the benefits of mitigation against the costs	38
2.6 A graphical representation of the benefits and costs	39
2.7 Valuing the future relative to the present	42
2.8 The Review's recommendations in a world of uncertainty and important immeasurable impacts	45
<hr/>	
<b>3. The science of climate change</b>	<b>47</b>
3.1 The earth's atmosphere and the natural greenhouse effect	48
3.2 Understanding climate change	53
3.3 Linking emissions and climate change	57
3.4 Addressing the extremes: severe weather events, low likelihood outcomes, and thresholds	70
3.5. Uncertainty in the climate science	74
3.6 The science behind global mitigation	76

<b>4. Emissions in the Platinum Age: the rapid, recent and projected future growth of greenhouse gas emissions</b>	<b>87</b>
4.1 Greenhouse gas emissions by source and country	87
4.2 Recent trends in carbon dioxide emissions from fossil fuels	89
4.3 Existing emissions projections	92
4.4 The Review's no-mitigation projections: methodology and assumptions	93
4.5 Results from the Review's projections and comparisons with existing projections	96
4.6 The impact of high energy prices	101
4.7 Resource limits	104
<b>5. Observations and projections of global climate change</b>	<b>111</b>
5.1 How has the climate changed?	112
5.2 Understanding climate change projections	120
5.3 Projected climate change for the no-mitigation and mitigation cases	124
5.4 Assessing the extremes	132
<b>6. The Australian context to climate change</b>	<b>143</b>
6.1 Attributing observed and projected climate change to humans	144
6.2 Historical climate change in Australia	144
6.3 Projected climate change in Australia	151
<b>7. Impacts of climate change on Australia</b>	<b>161</b>
7.1 Understanding Australia's vulnerability to climate change	164
7.2 Implications of the no-mitigation case for Australia	165
7.3 Direct impacts of climate change on Australia	168
7.4 Indirect impacts of climate change on Australia	186
7.5 Conclusion	193
7A Climate cases considered by the Garnaut Review	197
7B Infrastructure impacts criteria	198

<b>8. Australia's emissions and the economy</b>	<b>199</b>
<b>8.1</b> Australia's emissions profile and international comparisons	199
<b>8.2</b> Emissions profiles of Australian industries	206
<b>9. The modelled economic consequences of climate change in Australia</b>	<b>213</b>
<b>9.1</b> Capturing the impacts of climate change through economic modelling	214
<b>9.2</b> Representing climate change impacts in economy-wide analyses	217
<b>9.3</b> The contribution of individual climate change impacts to net economic impacts	241
<b>9.4</b> A final caution	244
<b>10. The wider costs and benefits of climate change mitigation in Australia</b>	<b>249</b>
<b>10.1</b> What proportion of market impacts does the modelling include and how significant are the exclusions?	250
<b>10.2</b> Insurance costs of climate change mitigation—extreme climate change scenarios	260
<b>10.3</b> Non-market impacts that Australians value	264
<b>10.4</b> Assessing the costs of climate change beyond 2100	266
<b>10.5</b> Implications for evaluating the costs and benefits of climate change mitigation policy	267
<b>11. The international response to climate change to date: an assessment</b>	<b>269</b>
<b>11.1</b> The evolving international framework for addressing climate change	270
<b>11.2</b> National-level commitments and policies to mitigate climate change	273
<b>11.3</b> Assessment of progress under the Kyoto Protocol	277
<b>11.4</b> Projections given the current trajectory of mitigation effort	280
<b>11.5</b> Accelerating progress	281

<b>12. Towards agreement on global and national emissions limits</b>	<b>289</b>
<b>12.1</b> Agreeing on a global goal	290
<b>12.2</b> What form should national commitments take?	294
<b>12.3</b> A graduated approach to national commitments	297
<b>12.4</b> Principles for allocating emissions entitlements across countries	300
<b>12.5</b> Shaping a per capita approach to the allocation of emissions entitlements	305
<b>13. Deepening international collaboration</b>	<b>309</b>
<b>13.1</b> International public funding for mitigation	310
<b>13.2</b> International public funding for adaptation	315
<b>13.3</b> International trade in emissions rights	318
<b>13.4</b> Price-based sectoral agreements for the trade-exposed, emissions-intensive sectors	321
<b>13.5</b> Climate change and trade policy	323
<b>13.6</b> International aviation and shipping	325
<b>13.7</b> Forestry-related emissions	326
<b>13.8</b> Enforcement mechanisms	330
<b>14. Australian mitigation: overview of the policy challenge</b>	<b>337</b>
<b>14.1</b> Emissions entitlement limits for Australia	339
<b>14.2</b> Addressing the greatest market failure ever seen	341
<b>14.3</b> Mitigation policy: a broader reform agenda	345
<b>14.4</b> Income distribution effects	356
<b>15. An Australian emissions trading scheme</b>	<b>359</b>
<b>15.1</b> Framework to guide scheme design	361
<b>15.2</b> The emissions trading scheme in operation	364
<b>15.3</b> Transition period: Australia's emissions trading scheme to the end of 2012	390
<b>15.4</b> Optimal design features of an emissions trading scheme under a global agreement	392
<b>15A</b> Trade-exposed, emissions-intensive firms	397

<b>16. Research, development and innovation</b>	<b>403</b>
<b>16.1</b> What is innovation and how does it happen?	405
<b>16.2</b> Ensuring optimal levels of early research	408
<b>16.3</b> Rewarding early movers	414
<b>16.4</b> An overarching framework for innovative activities	424
<b>17. Network infrastructure market failures</b>	<b>427</b>
<b>17.1</b> Infrastructure for the transmission of electricity	429
<b>17.2</b> Infrastructure for the distribution of electricity	435
<b>17.3</b> Gas transmission infrastructure in Australia	437
<b>17.4</b> New infrastructure for the transportation of carbon dioxide	438
<b>18. Information and agency barriers</b>	<b>443</b>
<b>18.1</b> The impact of information and agency barriers	444
<b>18.2</b> Public good information	446
<b>18.3</b> Information asymmetry	452
<b>18.4</b> Early adopter spillovers	454
<b>18.5</b> Principal–agent problems	455
<b>18.6</b> Minimum performance standards	458
<b>18.7</b> Applying the market failure framework to buildings	460
<b>19. Income distribution effects of climate change mitigation policy</b>	<b>469</b>
<b>19.1</b> Impacts will flow through the economy, and will be uneven	470
<b>19.2</b> Effects of an emissions price on households	474
<b>20. The energy transformation</b>	<b>481</b>
<b>20.1</b> The role of energy and the basis for transformation	482
<b>20.2</b> Drivers of the transformation	489
<b>20.3</b> The path to transformation	497
<b>20.4</b> Key economic impacts	507
<b>20.5</b> Risks to the transformation	507
<b>20A</b> Stationary energy compensation	511

## **Contents (*continued*)**

List of figures and tables	515
List of shortened forms	520
Glossary	522
